HOW IT WORKS:

White willow bark contains salicin, which probably decomposes into salicylic acid in the human system. The structural formulas for acetylsalicylic acid (Aspirin) and salicylic acid are quite similar. It is the salicin that is thought to give white willow its anti-inflammatory, antirheumatic, antipyretic (fever-reducing), and analgesic properties.

DID YOU KNOW...

Hippocrates wrote in the fifth century BC about a bitter powder extracted from willow bark that could ease aches and pains and reduce fevers.
